

The Open Subsurface Data Universe, i.e. OSDU, was initiated at Mar 2018. Its Mission is to standardize the data handing rule across all concerned parties, including NOC, Majors, IOC, and all related service companies, so that the work processes of energy industry become more efficient and resilient against upcoming Energy transition wave & zero carbons.

The activities have started with the area of subsurface, but now it is expanding to the area of renewable energies as well as CCS with more than 200 companies involved. The presentation will cover brief history of activities and future directions.
